10. Synopsis	The primary objective of this course is to extend and deepen student's understanding of the various research approach and methodologies in the business and management discipline. In addition to lecture discussions and reading materials, the course places greater emphasis on the practical side (hands-on) of research, covering prevalent techniques used in quantitative and qualitative research. Students will be exposed to theory-testing and advanced analytical procedures, including how to synthesize the literature, interpret findings, and prepare for proposal defense/viva. Each session will be led by a professor or scholar who is knowledgeable and experienced in his or her respective field. The course is designed to groom student's understanding of research and impart fundamental skills required to undertake supervised research projects in their chosen area of interest. At the end of the course, all students have to present their independent work-in-progress research paper at the second Doctoral Colloquium to a panel of professors. Students will receive valuable feedback to enhance their research projects and make preparations for proposal defense.
